FOR IMMEDIATE RELEASE

n|Frame Breaks Ground on New \$2 Million Indianapolis Workplace and Disaster Recovery Center

Company Expands Headquarters Facility by 15,000 Square Feet

Indianapolis [February 8, 2011] — In a move to consolidate its expanding technology infrastructure, n|Frame, one of Indianapolis' largest data centers and network management firms providing managed IT services, is relocating its 15,000 square-foot Indianapolis workplace and disaster recovery center to its headquarters campus in Carmel, Indiana. The company plans to invest approximately \$2 million in the expansion project.

“It makes strategic sense to consolidate our entire operation under one roof, giving our customers more direct access to the technology infrastructure, people and processes that ensure their systems stay up and running,” said Robert J. Alcorn, n|Frame's chief operating officer. “Over the last 15 years we have continued to invest in our headquarters facility to create one of the state's largest and most technologically-sophisticated data centers. With this move, our workplace and disaster recovery center will benefit from a 24/7 on-site engineering team, guaranteed power sources, advanced security features as well as multi-carrier access to the Internet and telecommunication systems.”

n|Frame broke ground on its new Indianapolis workplace and disaster recovery center in late January. Construction will be complete and the new technology center will be fully functionally by May 2011. In the meantime, n|Frame will continue to serve its business continuity clients from its original workplace and disaster recovery center in Carmel, Indiana.

n|Frame's new 15,000 square foot Indianapolis workplace and disaster recovery center is designed to offer its customers an alternate corporate command center where their employees can work and the business can continue to operate seamlessly in the event of an emergency (such as a fire or heating/cooling malfunction) or natural disaster. Through this center, customers have immediate access to nearly 200 professional, furnished work spaces with pre-configured computer stations; live phones connected to a backup telecommunications

system; and computer terminals with a direct connection to the corporate network, systems and current data. The entire operation is maintained and backed up through n|Frame's main data center.

n|Frame prepares businesses for disruptions that last from a few minutes to several days or weeks. Common business interruptions that force companies to shut their doors include power outages, HVAC failure, flooding, sewer backups, roof leaks and pipe bursts. Organizations also can be displaced due to positive business growth initiatives such as major new business wins, seasonal peaks, or mergers and acquisitions that lead to an unexpected need for more space to accommodate additional employees.

"Our workplace and disaster recovery solutions are a strong complement to our other contract technology management services," said Alcorn. "They allow companies to mitigate the risks associated with short-term and long-term business interruptions, from air conditioning or heating failure to structural damage. While these issues may seem like minor inconveniences, they can quickly create an unbearable work environment that forces an office to shut down. Our new Indianapolis workplace and disaster recovery center offers displaced businesses an alternate site of operation that is configured to immediately support their network, computing, communications and human resource needs."

Companies that currently take advantage of n|Frame's workplace and disaster recovery solutions include call centers, fulfillment centers, e-commerce businesses, software companies, insurance companies, healthcare organizations, life science companies, colleges and universities and professional services firms such as accounting, law and marketing firms.

About n|Frame

Founded in 1995 to provide telecommunications, Internet access and managed technology services, today n|Frame is one of the Indiana's largest data centers and IT infrastructure service providers. All of n|Frame's services are provided from its \$30 million, SAS 70 type II compliant, state-of-the-art technology center in Carmel, Indiana (north of Indianapolis). Its 40,000 square foot secure facility is accessible by clients and staffed by certified IT engineers 24/7. n|Frame serves companies of all sizes and specializes in data center services, commercial-level Internet broadband access, network management, disaster recovery/business continuity and cloud computing/virtualization services. n|Frame is part of a national network of data centers owned by Continental Broadband.
