n|Frame, Indianapolis' Largest Data Center, Publishes Case Study on Evanced Solutions' Successful Migration to Virtualization

Indianapolis [June 3, 2010] — n|Frame, one of Indianapolis' top technology infrastructure and data center firms, recently published a case study detailing a successful virtualization engagement with Evanced Solutions. The case study documents the reasons the national software company transitioned its technology infrastructure to a virtualized computing environment.

Evanced Solutions offers software to libraries across the country. As the company's business continues to shift from client-side application hosting to a hosted software-as-a-service (SaaS) model, n|Frame's virtualized IT infrastructure environment becomes a more important factor in its future growth and success. This new approach to technology allows Evanced to exponentially offer new software applications, support an unlimited number of clients and host vast volumes of data – all accomplished at an incremental cost as growth actually occurs.

“Anyone switching from a traditional computing environment to virtualization needs to realize it is not an apples-to-apples comparison,” comments Todd Cutler, Evanced Solutions, founder and chief executive officer. “If you are operating on antiquated equipment, you can't begin to compare costs, performance or security with a virtual approach. Going virtual offers a much better long-term return on your investment because you gain better system performance, speed, accessibility and security – plus, virtualization offers the luxury of instant scalability without the up-front capital costs associated with traditional IT hardware. With a knowledgeable partner like n|Frame, you also gain an advocate and expert partner that will take care of you from transition throughout the life of the relationship.”
