**n|Frame Only Indiana Company Named Among
Top 10 IT Infrastructure Providers**

*Annual Black Book of Outsourcing states survey also finds managed services
provider consistently exceeds client expectations*

INDIANAPOLIS (September 8, 2008) – n|Frame, Indiana’s premier data center and IT infrastructure solutions provider, was recently ranked among the top 10 global IT infrastructure outsourcing suppliers in mid-tier markets, according to an unbiased survey by the Black Book of Outsourcing.

Each year, Brown-Wilson Group and Black Book Research undertake an annual survey into organizations’ satisfaction with their IT outsourcing service providers. These research results are compiled into what is recognized as the most extensive perception study of outsourcing vendors, validated by more than 24,000 service users from around the globe.

Among individual criteria measured, n|Frame ranked third globally in support and customer care as the company significantly exceeds client expectations, the report stated. Similarly, n|Frame ranked fourth overall in trust, which means that the company’s clients believe n|Frame has the people, processes and resources in place to effectively deliver the desired business results. n|Frame also was named within the top 10 for innovation, reliability, client relationships and breadth of service offerings, among all global IT outsourcing service providers.

“Companies opt to outsource management and monitoring of their IT infrastructure for a variety of reasons,” says Robert J. Alcorn, n|Frame’s chief operating officer. “The bottom line is outsourcing enables businesses to reallocate their internal resources from reactive break-fix tasks to proactive, strategic initiatives that will help them maintain a competitive edge.”

The report notes that reasons for IT outsourcing include maximizing limited internal head count and budgetary resources, as well as gaining access to 24/7 infrastructure management and support and IT expertise companies can’t afford to maintain internally.

“n|Frame understands our customer’s business pains, and we’ve worked hard to help solve those pains as Indiana’s most advanced outsourcing provider of data center, network management and disaster recovery services,” states Alcorn. “Foundationally, we strive to provide unparalleled holistic customer care and technical expertise, so it’s certainly rewarding to be recognized by our customers and the industry for our efforts.”
